POWER SUPPLY SITUATION ON THE CAMPUS

Towards improving the power supply situation on the campus, the University authorities procured two 2MVA 11KV generating sets. The generators have been delivered and the installation is being done in the Power House of Works and Maintenance Department. The installation will soon be completed, and then, the University will be able to enjoy the services of those generating sets.

However, at present, we have to depend heavily on the supply from PHCN with supplement from the unreliable aged generators. We solicit the understanding of the entire Community as we strive to ensure the best in terms of power supply to the University Community while the installation of the new sets is going on.

Thank you.
